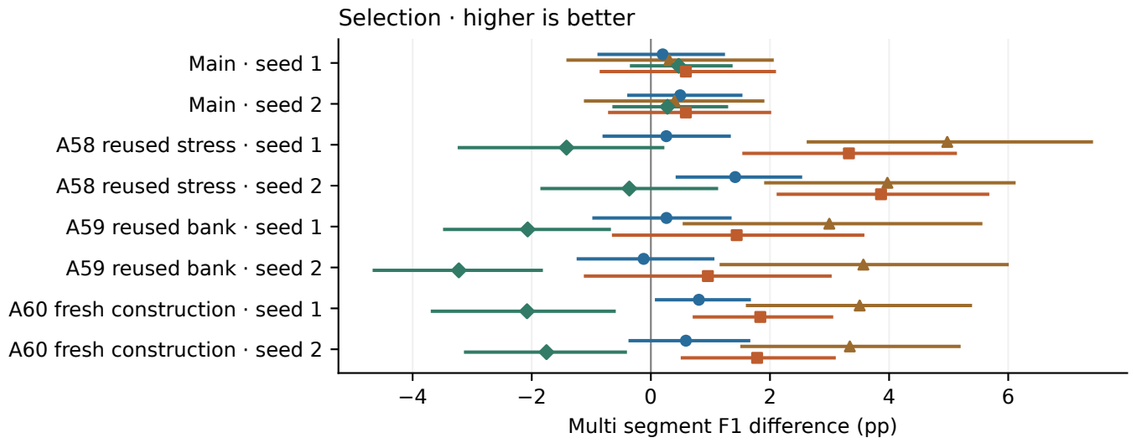
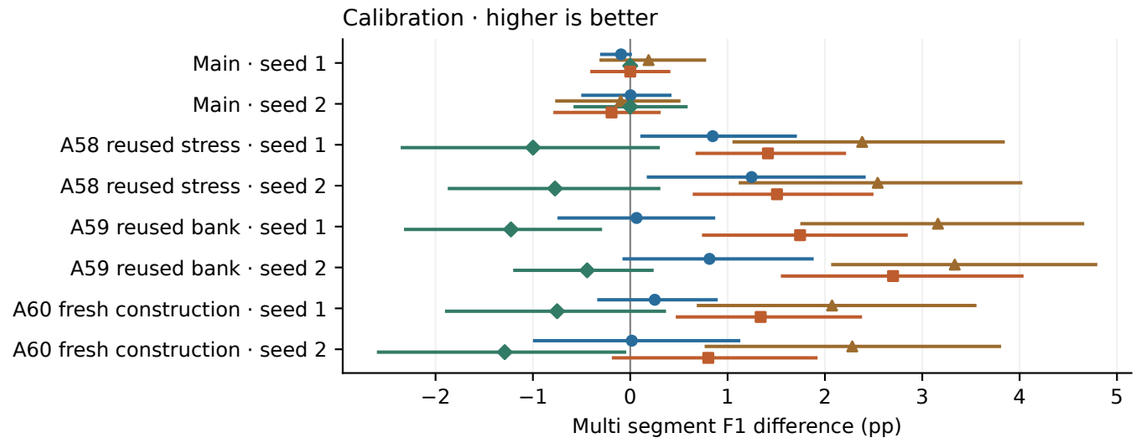
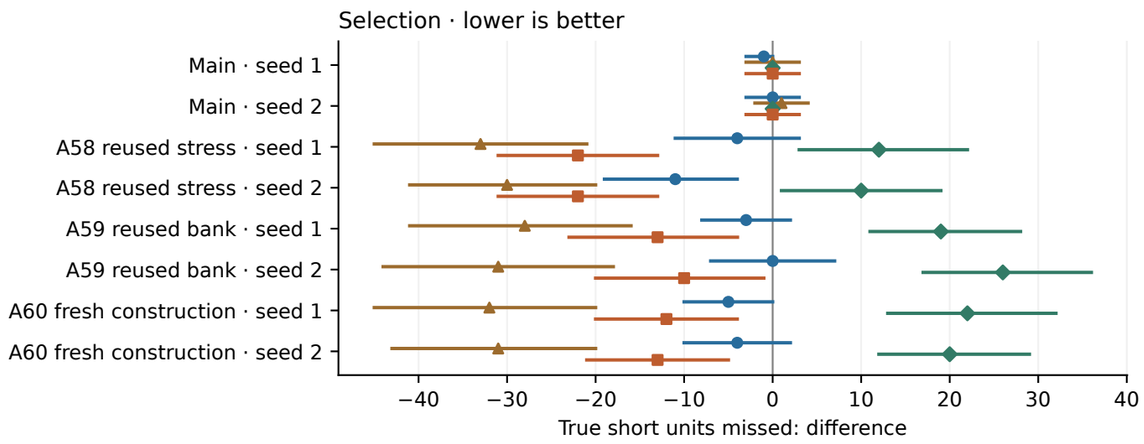
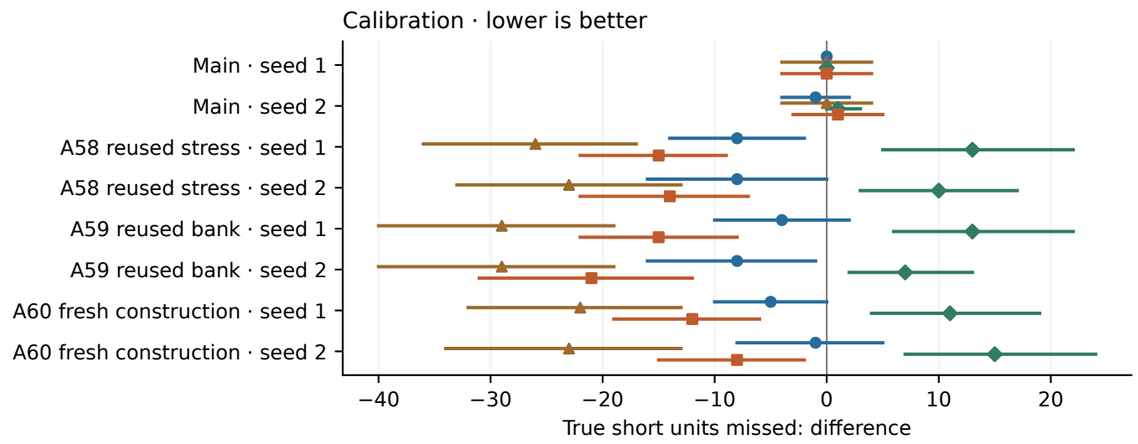
A60: JEPA proposals, A08 anchor and learned harm veto

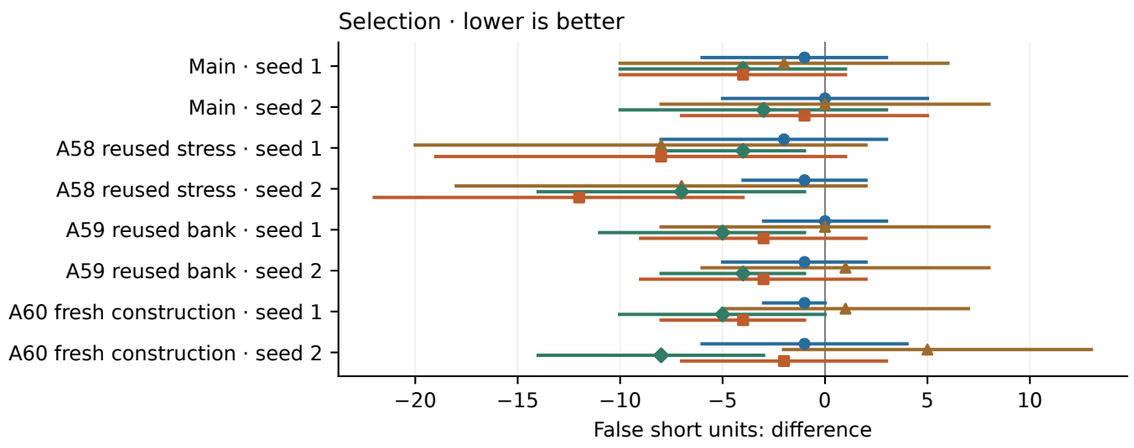
Fixed 6000 updates and both seeds; conditional paired 95% intervals. Short = at most 16 original positions (1.6 s at 10 Hz).

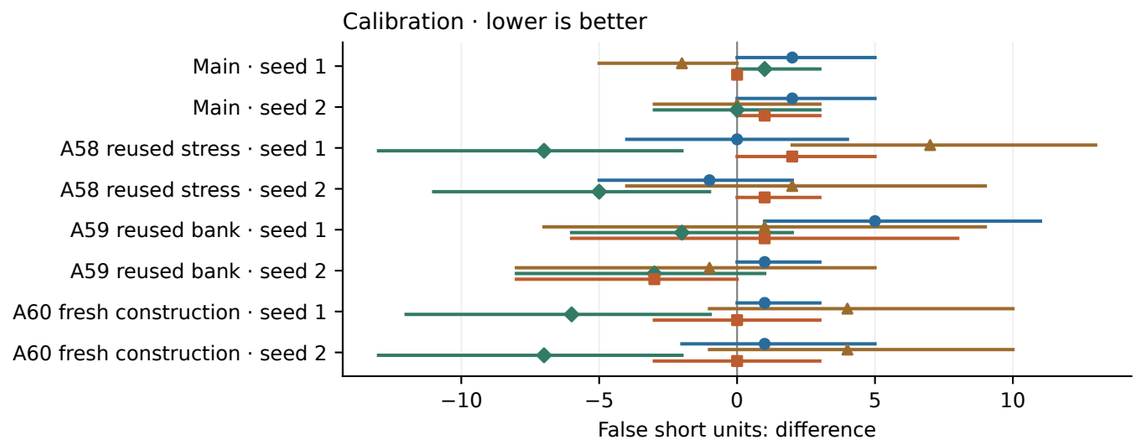


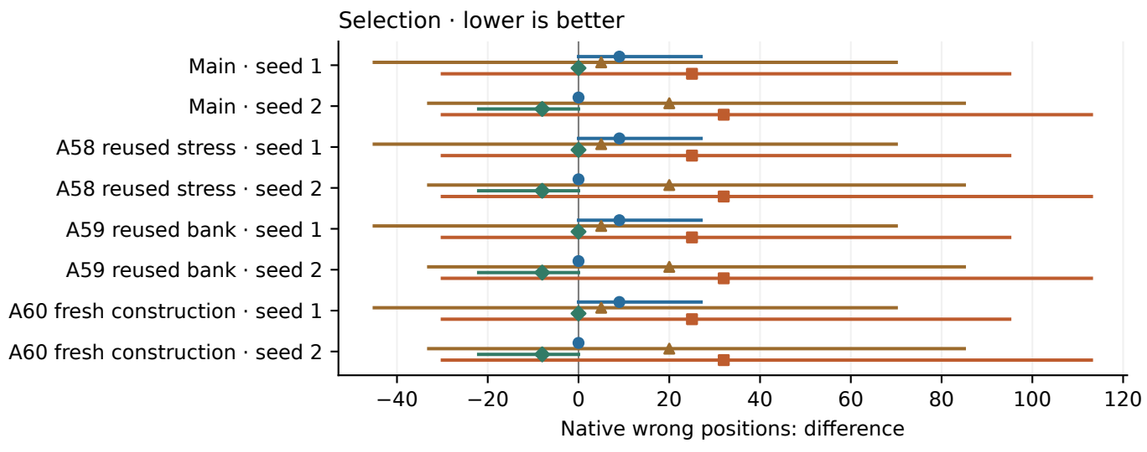


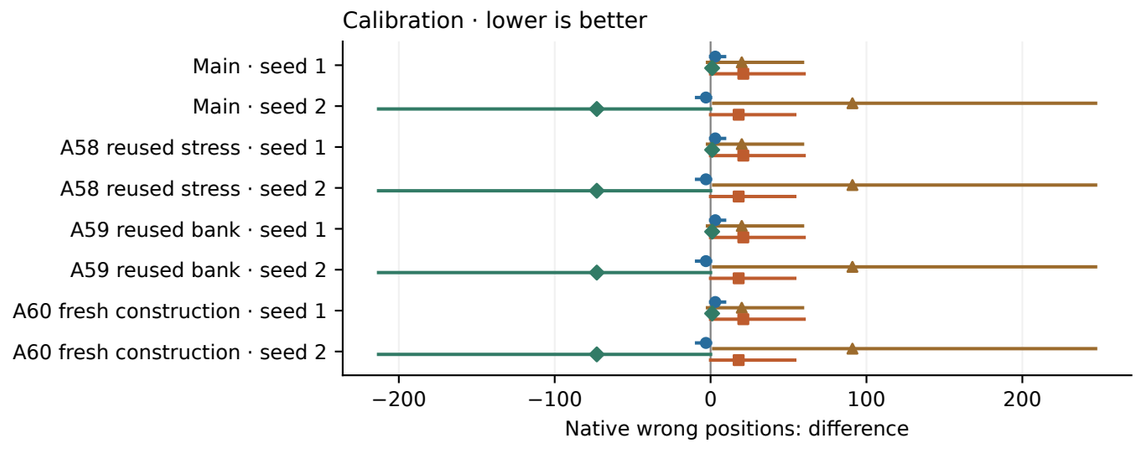


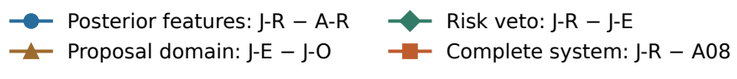












Both feature controls require JEPA proposal geometry. O/E/R share weights; the veto predicts harms and supplies no calibrated risk guarantee.

G preserves the baseline occupancy majority mechanically; native frame/cut harms remain measurable. All 124 rows and 144 contrasts are retained.

Bootstrap units: whole sessions / fixed streams / fixed pairs. Reused sources and propagated clip labels do not provide independent clinical validation.

Summary SHA256 7cbd7c5f48e33bc1. Points and percentile intervals are drawn separately, including when the point lies outside the interval.
