
MaxONE action+no-op per multi stream; every domain uses the observable G majority guard. Native and pair metrics are outside the oracle objective.

True net-safe: H−R≤0 and ΔFP16≤0. True gross-safe: H=0 and ΔFP16≤0. These constraints use labels and are not deployable.

Only unrestricted ceilings bound policies that actually violate safety. A safe-oracle gap is not solely learnable ranking loss or guaranteed attainable gain.
