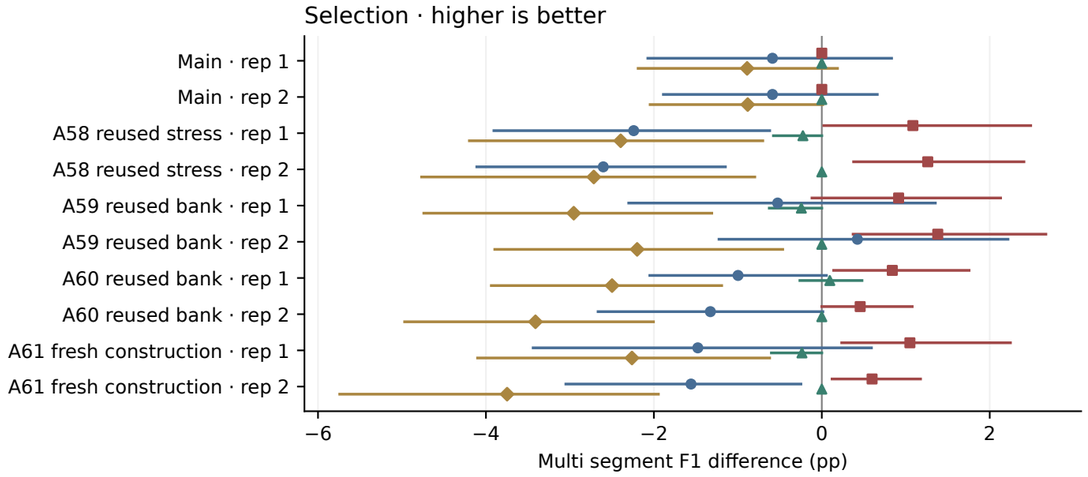
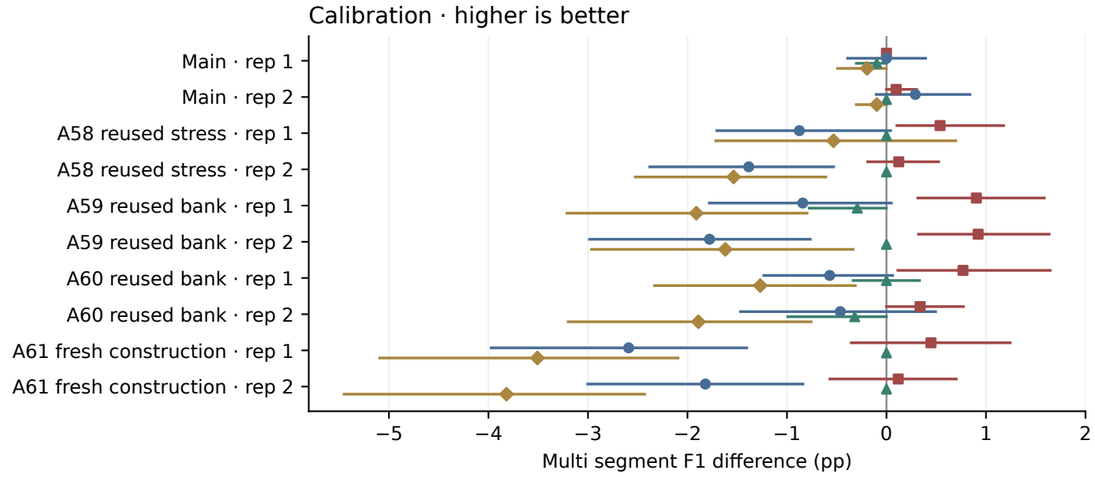
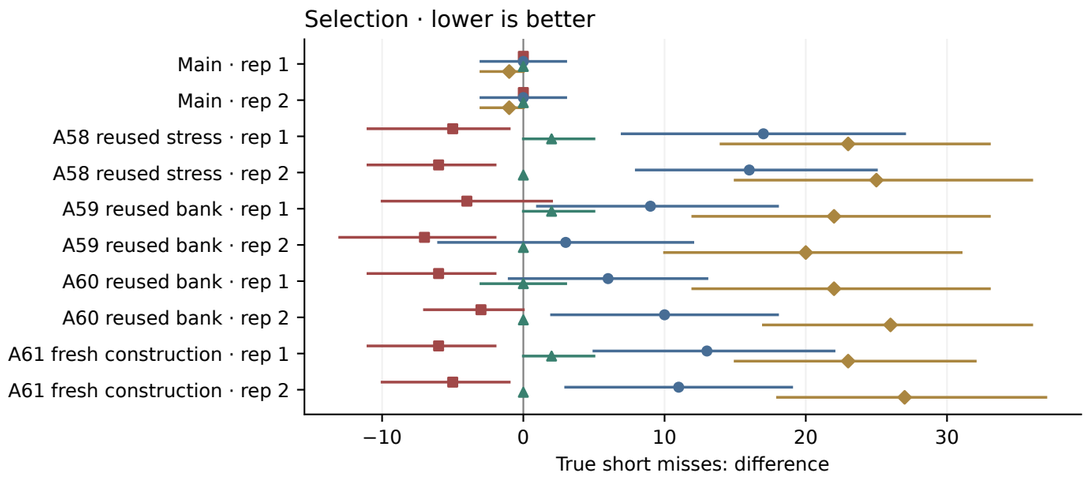
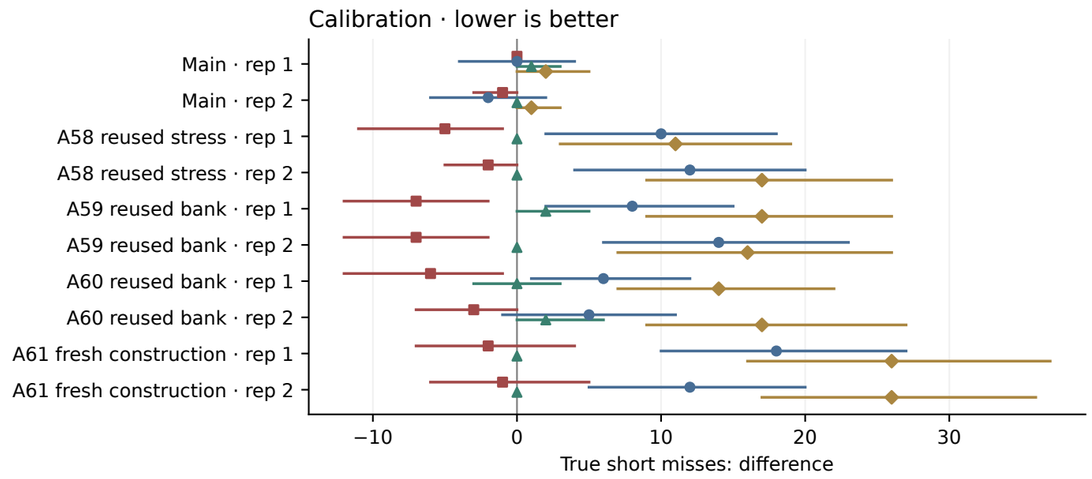
A61: safety target, within-sequence ranking and same-top veto

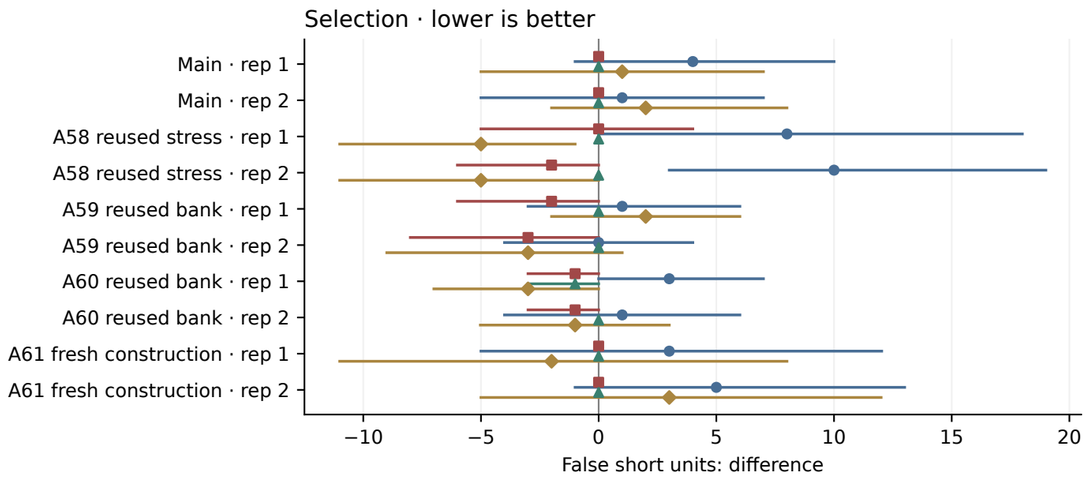
Fixed6000 / both seeds; conditional paired95% intervals. Primary S-L-C; all240 prespecified contrasts retained in the tables.

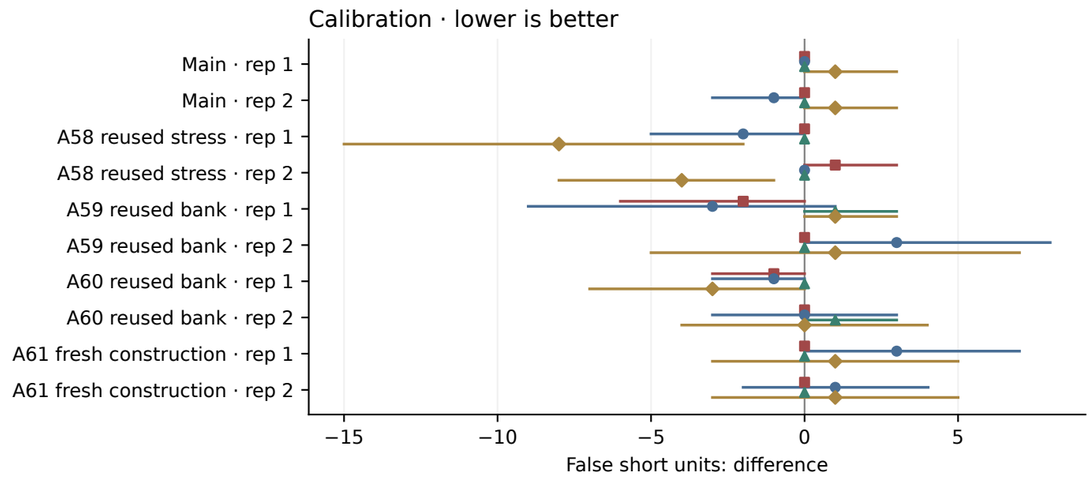


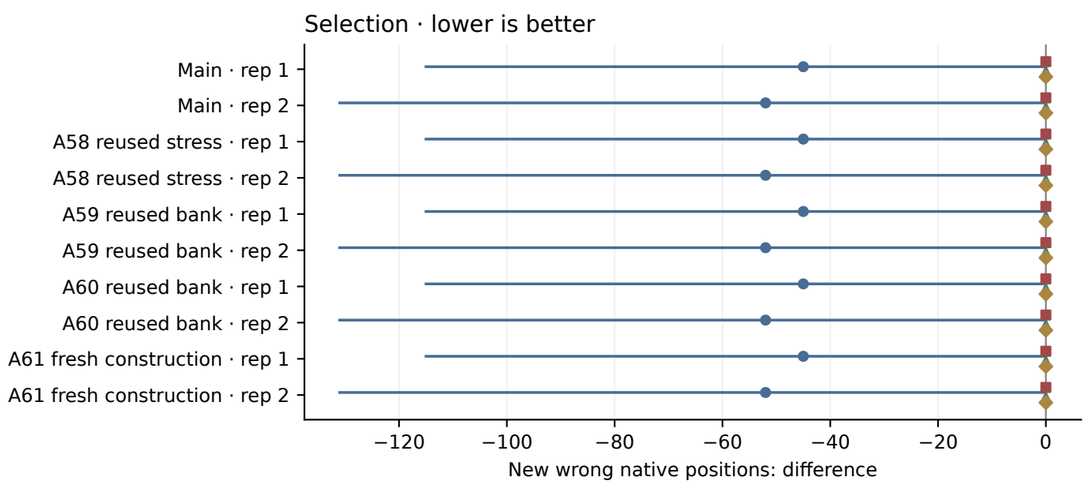


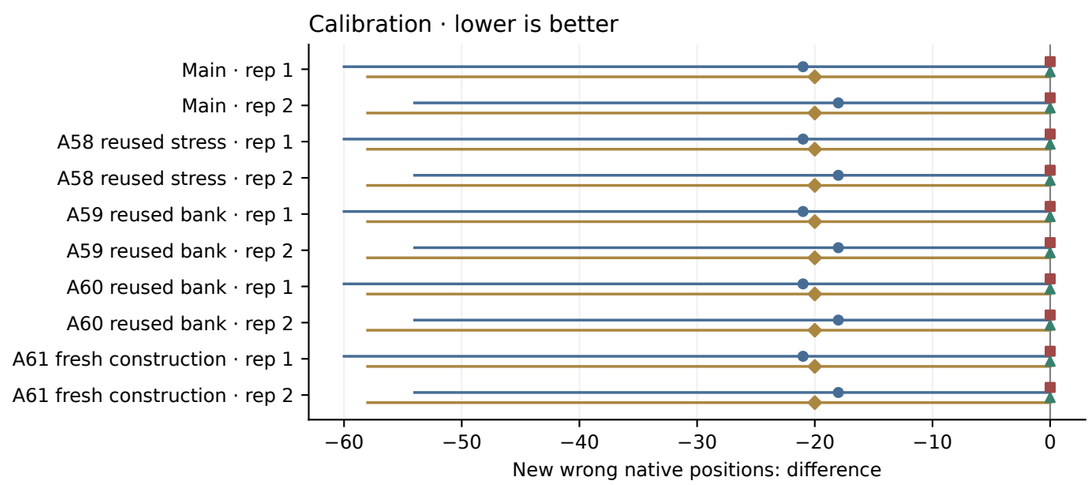












Points and intervals are separate; short ≤16 original positions (1.6s at10Hz). Hist. A60 seeds are replicate-mapped, not equal training seeds.

Session / fixed-stream / fixed-pair bootstrap; shared sources and propagated clip labels do not establish independent clinical evidence.

G preserves the occupancy majority only. C uses reused inner calibration, an empirical evidence cutoff and no safety guarantee.
